- (1) In air @ 25°C and 1 atm. Expected life varies inversely with changes in O2 concentration, temperature, pressure.
- (2) Under constant conditions. Calibrate as near sample conditions as possible. Calibrate with 95-100% oxygen for measurements > 40% oxygen.
- (3) Once the signal output stabilizes following a step change in temperature.
- (4) Recommended 0-40° C. Sensors may be stored at -10 to 55° C on an intermittent basis only.
- (5) Ex-factory unless agreed to in writing. Under normal application conditions sensor is warranted to be free of defects in material and workmanship for the period specified above proved the sensor is properly installed and operated. Analytical Industries Inc. shall not be liable for buyer's negligence, misapplication, alteration or abuse. The sole remedy for a sensor determined to be defective by Analytical Industries Inc. is limited to replacing the defective sensor.
