

CS-PT Series Transmitter Accessory products

CS-Box Breathable Waterproof Junction Box

It is designed for connecting the cable in damp and dark environment. Especially in gauge pressure measurement and hydraulic pressure signal conversion, the measurement errors caused by non-vented chamber of pressure transmitter can be avoided through CS-BOX.

The structure is shown as the following figure.

Circumfluence Powered Indicator

CS-PT122 is a five digital value display for 4 to 20 mA circumfluence of pressure transmitters. The display head adopts high end micro processor chip to sample, filter, amplify, convert A/D, and filter digital signal, etc.

The display head can set and adjust the display value according to pressure transmitter range through buttons on surface. Even without pressure source, calibration is possible through reference pressure.

CS-PT122 includes two routes of open and close output, which can be set for upper and lower limits, etc.
