

MISIR™

Low Power HVAC Carbon Dioxide Sensor

MISIR is a low power (20mW⁴), high performance CO₂ sensor. Based on GSS patented solid state IR sensor technology and innovative optical designs, MISIR is configured to meet the requirements of the HVAC and Demand Led Ventilation markets.

- Low Power 20mW
- Measurement ranges from 0 to 1%
- Low noise measurement (<10ppm)
- 3.3V to 5V supply.
- Digital (UART)and Voltage Output Options
- Automatic calibration

Note 1: All measurements are at STP unless otherwise stated.

Note 2: External Pressure calibration required.

Note 3: Power measurements for standard CO2 sensor with 2 readings per second.

Note 4: Autocalibration is enabled by default on MISIR. For correct operation, the sensor must experience fresh air at some point during the autocalibration period. For details see the application note "COZIR Autocalibration". For other options, refer to users guide.
